

# INTERCOM SYSTEM

SUITABLE FOR NURSE CALL  
AND SCHOOL INTERCOM

## Nurse Call

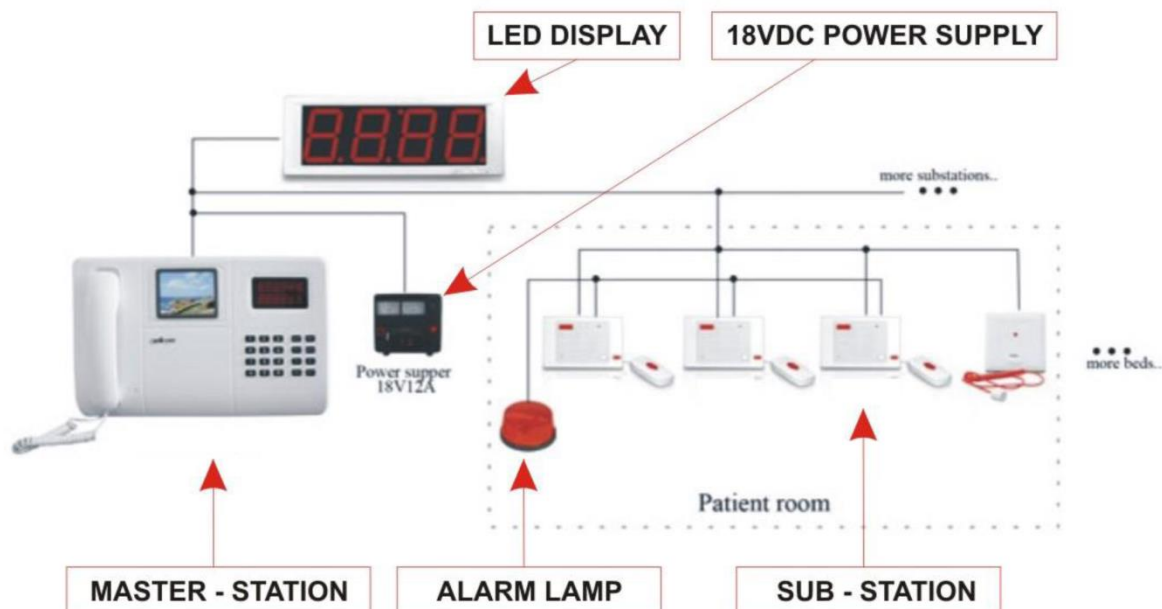

The Nurse Call System is the most important system of communication for daily nursing and emergencies. The purpose of a Nurse Call System is to create a convenient and warm environment, and improve the service of the hospital.

With 2-way voice communication, the system allows nurses to efficiently diagnose the patients' needs in a timely manner.

## School Intercom

With one Master Station and 999 potential Sub Stations/Intercoms, the 2-way voice communication system supports calls between single classes, group calls, announcements, class monitoring and call recording.

The administration software stores all sub-station information for ease of use.

### **Master Station**

Has the ability to manage up to 999 stations, with two-way communication, group calls, monitoring and recording.

The 16 x 4 LCD screen clearly displays 4-digit sub-station/patient room/classroom numbers.

The Master Station stores the last 10 incoming calls for quick call-backs.

### **Loud Speaker Intercom**

Installed in every classroom, the two-way communication allows reception / the principal to communicate with one class, a group of classes or make public announcements.

When connected to the master station, the intercom can record calls and monitor classrooms.

### **Alarm Lamp**

Installed above doors to patient rooms where nurses can see the alarm flashing from the nurses' station or the corridor.

The light turns on when the corresponding sub-station is calling. The light turns off when the call is answered or reverts to idle.

### **Pull Cord Sub-Station**

Installed in restrooms in hospitals for patients to call nurses in emergencies or for assistance.

The cord and the button, when activated, send a message to the master station immediately, alerting nurses to the patients' needs.

The waterproof, flush mount design ensures longevity.

### **Sub-Station**

Installed above each patient's bed for ease of use, the patient is able to press the button on the handy remote or the sub-station to call for a nurse.

Two-way communication to the master station allows nurses to meet the patients' needs in a timely manner.

The sub-station is connected to the corresponding alarm lamp, effectively guiding the nurse to the correct room.

### **LED Display**

The patient's 4-digit number will be displayed when the corresponding sub-station is activated

When not active with a call, the LED screen will show the time.
